**RULE 312 AMENDMENT**

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Prior to issuance, please amend the above-referenced application as indicated below.

## AMENDMENTS TO THE SPECIFICATION (ABSTRACT)

Please revise the Abstract of the Disclosure section as follows:

~~A Web-based system provides informational services for assisting customers in selecting products or other types of items from an electronic catalog of a merchant. Users of the system can create and join user communities, such as communities based on user hobbies, localities, professions, and organizations. The system also supports implicit membership communities that are based on email addresses (e.g., all users having a "nasa.com" email address), shipping/billing addresses, and other known user information. Using purchase history data collected for online users, the system automatically identifies and generates lists of the most popular items (and/or items that are becoming popular) within particular communities, and makes such information available to users for viewing. For example, in the context of an online book store users of the nasa.com community may automatically be presented a Web page which lists the bestselling book titles among nasa.com users, or may be sent email notifications of purchase events or hotselling books within the community. Another feature involves automatically notifying users interested in particular products of other users (preferably other members of the same community) that have purchased the same or similar products. For example, in one embodiment, when a user accesses a book detail page, the detail page is customized to include the names and email addresses of other members of the user's community that recently purchased the same book. A computer service monitors online browsing of an electronic catalog by a user, and notifies the user when a catalog item being accessed is one that has been purchased by an affiliated user, such as a contact or a fellow community member. The notification may include the contact information of the affiliated user, and/or may provide an option to send a message to the affiliated user.~~
